

Anti-friction bearing

Patent number: DE2942265
Publication date: 1980-07-17
Inventor: KAKUMOTO KEN-ICHI (JP); FUJITA YOSHIKI (JP)
Applicant: KOYO SEIKO CO
Classification:
- **international:** F16C33/66; F16C33/32; F16C33/62; H01J35/10
- **european:** C23C14/02B2; F16C33/30; F16C33/66
Application number: DE19792942265 19791019
Priority number(s): JP19780132041 19781025

Abstract not available for DE2942265

Abstract of corresponding document: **US4293171**

Of the components of an anti-friction bearing, the metallic components to be subjected to rolling friction or sliding friction, such as rolling elements, are coated with a multiplicity of metal layers by ion plating. The uppermost layer is made of soft metal with lubricating property. The solid solubility of the metal of each intermediate layer in each adjacent metal is higher than the solid solubility of the soft metal in the metal material of the component.
